

HydroTex

Solvent-based textile wastewater treatment for sludge reduction, water recovery, and circular solvent regeneration.

Problem

Textile dyeing and finishing plants face high color loads, sludge disposal burden, chemical consumption, and increasing compliance pressure from regulators, brands, and export markets.

Solution

HydroTex is developing a modular solvent-extraction and regeneration platform designed to remove dyes from wastewater, concentrate pollutants into a smaller waste stream, and support lower total operating cost.

Impact metric	Target / positioning
Sludge reduction	Up to 90% target, pending real-wastewater validation
OPEX	Target EUR 0.3-1.0 per m3
Solvent	Reusable bio-based solvent loop
Control	PLC-ready system with AI-supervised optimization option

Validation roadmap

Feasibility Study -> Real Wastewater Validation -> Pilot Project -> Commercial Deployment.

First market focus

Reactive cotton dyeing, knitwear, and garment dyeing facilities with sludge/disposal pressure and export-market sustainability requirements.
